

The electronic recycle event hosted by the Environmental Committee and held at Adams Park on Nov 13 netted 19,000 lbs of defunct computers, monitors, VCRs, stereo equipment, printers, batteries and assorted other electronic gizmos. Reusing and recycling electronics not only reduces clutter in homes, but it keeps hazardous and toxic materials out of landfills.

Complete PC Recycling in Kennesaw handled the collection, data destruction and recycling. These events are held twice annually; the next one will be in June, 2011.
